

Why Choose SITECERT ?

Sitecert is your ideal partner for mobile inspections. Our experience is second to none, ensuring that all your requirements are met and exceeded. www.sitecert.net

Why You Will Love Our Simplicity

About Sitecert

Sitecert's inside track to the lifting industry has produced a comprehensive and easy-to-use [mobile inspection system](#).

From the bottom up, the system was designed and developed specifically for the lifting industry. This enabled an efficient system to be developed around the examiners in the field, ensuring foremost, that it is [simple to use](#).

Equipment can be quickly identified utilising our unique "Smart Search" function so RFID's or Barcodes are not a prerequisite to use the system where [cost](#) is often the factor with automatic identification.

Sitecert understands that you may have local or client specific standards to apply during examinations. We put you in control by allowing you to create the Checklists/ Questions [online](#) which instantly appear on your examiners PDA's.

Syncing in the field, enables certificates to be created before the examiner leaves the site. They do not have to return to the office to sync with a computer, as it is done in seconds over the [mobile phone network](#).

Adding Equipment in the Field

Adding equipment in the field is very [quick](#), with examiners utilising product groups, sub groups and other dropdowns to easily describe equipment. Utilising dropdowns reduces the need to type into PDA's which is slow and error prone.

New dropdowns can be created as you build the system. These dropdowns form the basis of "smart search" which enables equipment to be identified quickly in the future for both examiner on PDA and your clients online.

Local Standards and Checklists

Local standards and checklists can be applied by users, without the need to contact Sitecert. This allows a [greater level of service](#) to high-end clients.

Sitecert has clients worldwide and is compliant with **Dubai Accreditation Authority (DAC)** requirements which is one of the more complex regulatory standards worldwide. Different standards apply to equipment depending on the country that you are operating in.

Continuous Upgrades

Sitecert evolves based on the requirements of our customer. Being web-based, all our customers can take advantage of these upgrades as they happen, **free of charge**.

Recent upgrades enables [LEEA](#) team cards to be uploaded to examiner profiles verifying competency. Future upgrades include an **iPhone** and **Android** app that will allow your clients to view certificates quickly on their smartphones which is branded with your company logo.

The app also incorporates a rigging reference chart which your customers will love you for!
